What is claimed is:

5

15

20

25

- 1. A fuel cell system comprising:
- a fuel cell for generating electricity using a hydrogen gas and an oxidant gas as a reaction gas;
- a hydrogen discharge unit for discharging hydrogen from the fuel cell under a predetermined condition;
 - a hydrogen concentration reduction process unit for reducing the concentration of hydrogen discharged from the hydrogen discharge unit;
- an instantaneous hydrogen concentration of a gas processed by the hydrogen concentration reduction process unit; and

an average hydrogen concentration calculating unit for calculating an average hydrogen concentration per hour of a gas processed by the hydrogen concentration reduction process unit, wherein

a hydrogen discharge from the fuel cell by the hydrogen discharge unit is prohibited in the event that an instantaneous hydrogen concentration detected by the hydrogen concentration detection unit exceeds a first threshold, or in the event that an average hydrogen concentration calculated by the average hydrogen concentration calculating unit exceeds a second threshold which is lower than the first threshold.

2. A fuel cell system as claimed in claim 1, further

comprising a cell voltage sensor for detecting a cell voltage of the fuel cell so that the hydrogen discharge from the fuel cell by the hydrogen discharge unit can be selected based on the cell voltage.

5

3. A fuel cell system as claimed in claim 1, wherein the hydrogen discharge from the fuel cell by the hydrogen discharge unit can be performed intermittently.
